AI, AI Agents and Crypto

How does it fit?

“This is a business, understand the fundamentals and you will win in investments.”

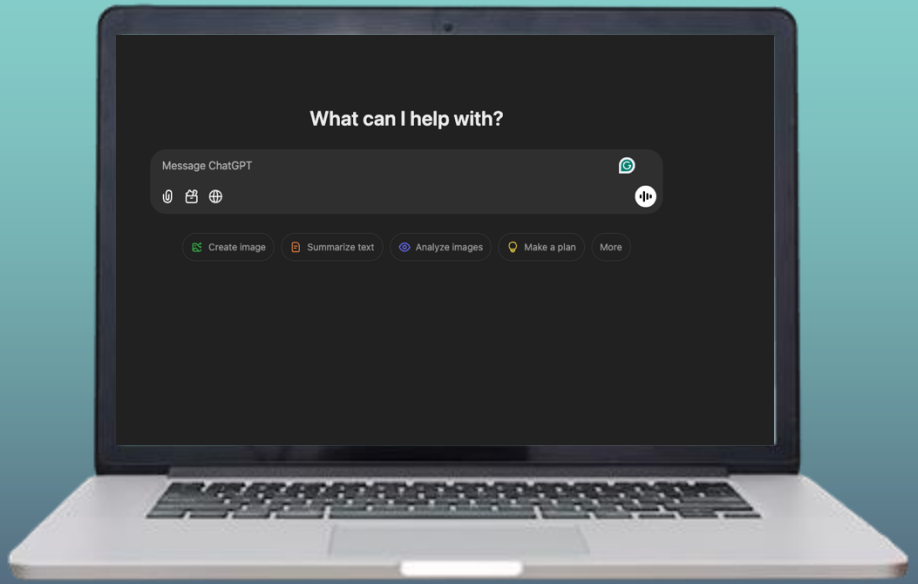
What is AI



AI is the simulation of human intelligence in machines designed to perform tasks that typically require **cognitive abilities** like learning, reasoning, and decision-making.

What are AI Agents?

"AI agents are intelligent programs designed to **perform tasks autonomously**. Unlike traditional software, they don't need **step-by-step instructions** — they **understand goals** and figure out how to achieve them on their own"

How Crypto AI Agents Work

Use Cases

Marketing AI agent

A suite of AI agents

- Defines tasks
- Creates schedule
- Initiates tasks
- Evaluate
- repeat

Development AI Agent

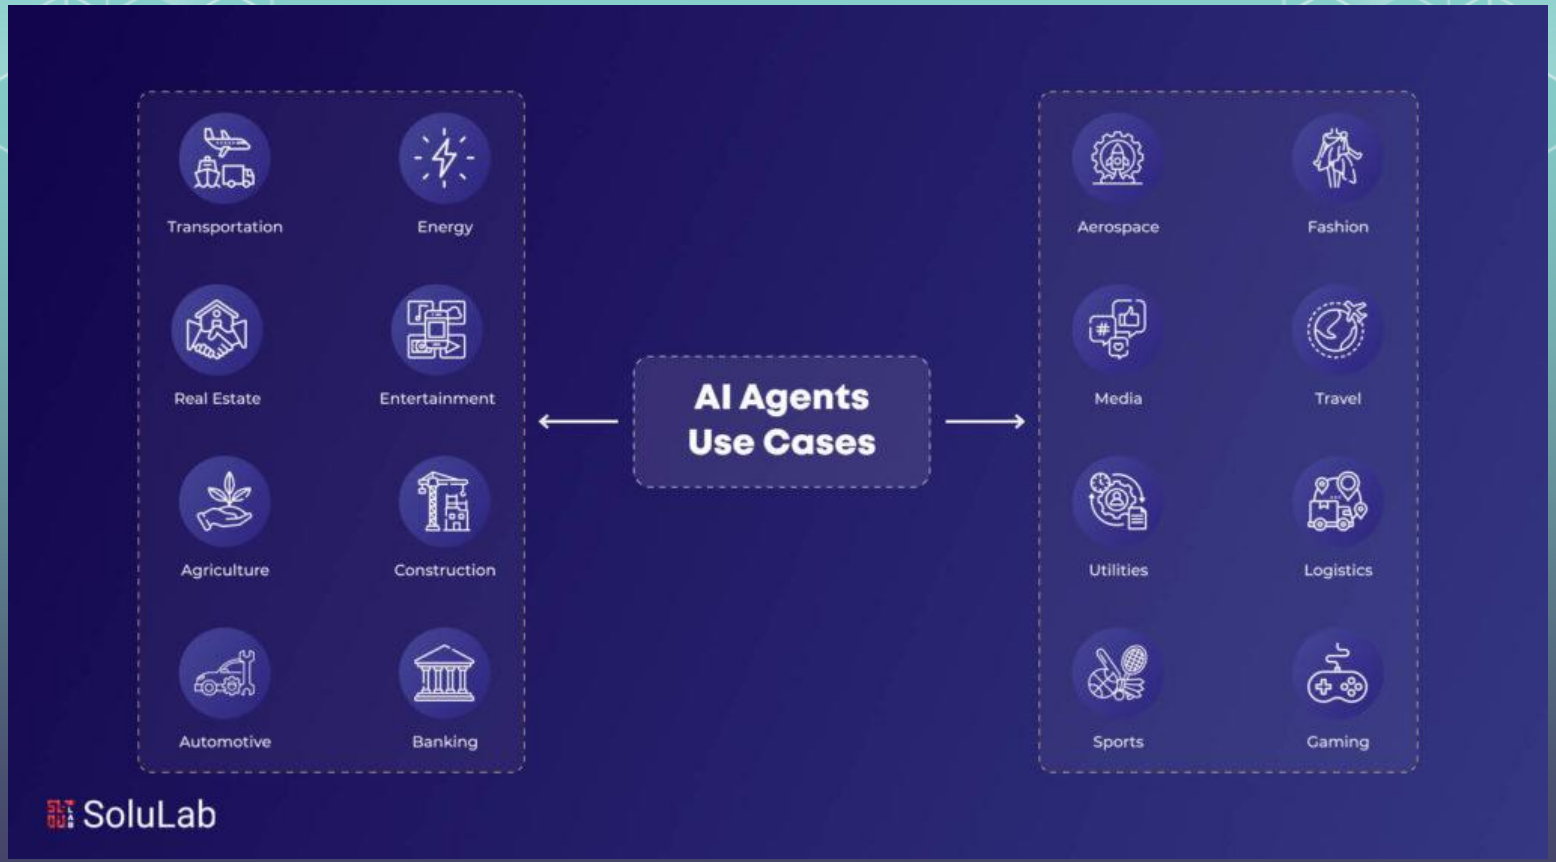
Agile team members

- Receives description of the product
- Feedback
- repeat

Trading AI Agent

Strategist

- Understands goals
- Absorbs Knowlege
- Implementation
- Adjustments
- Repeat

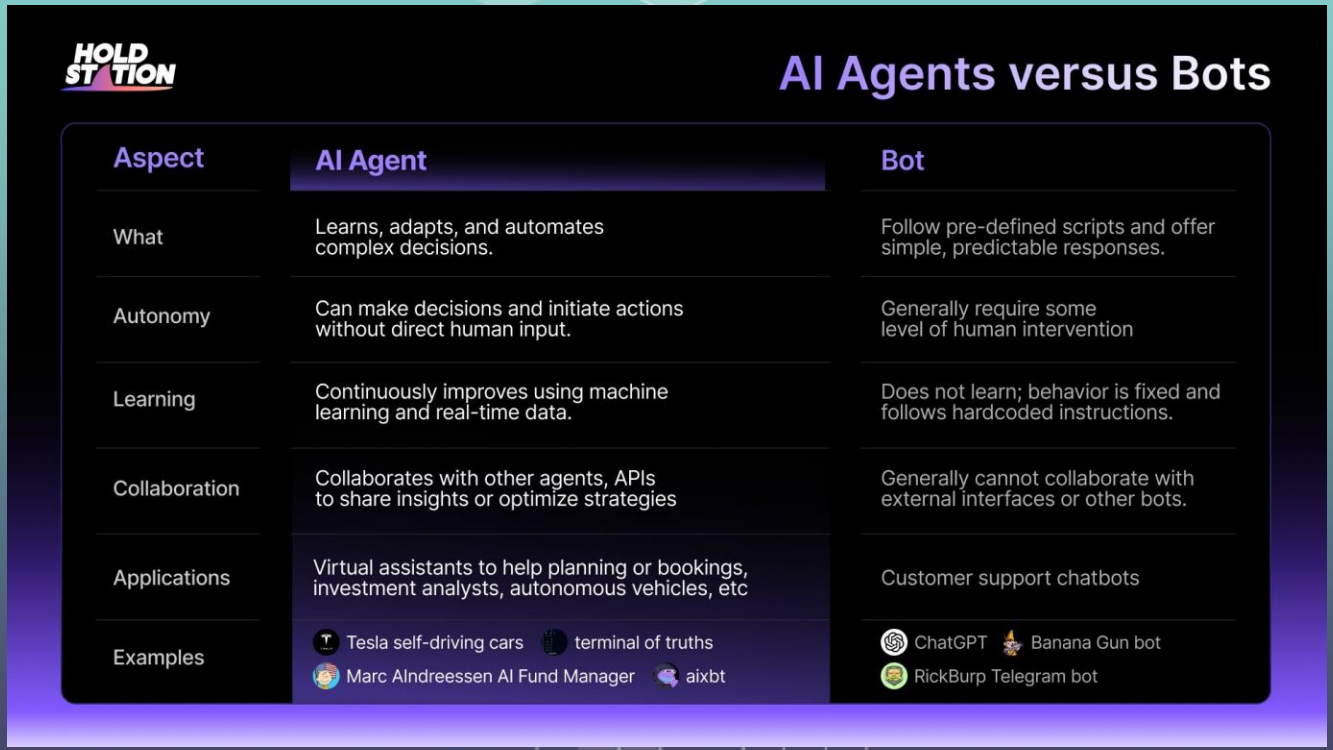


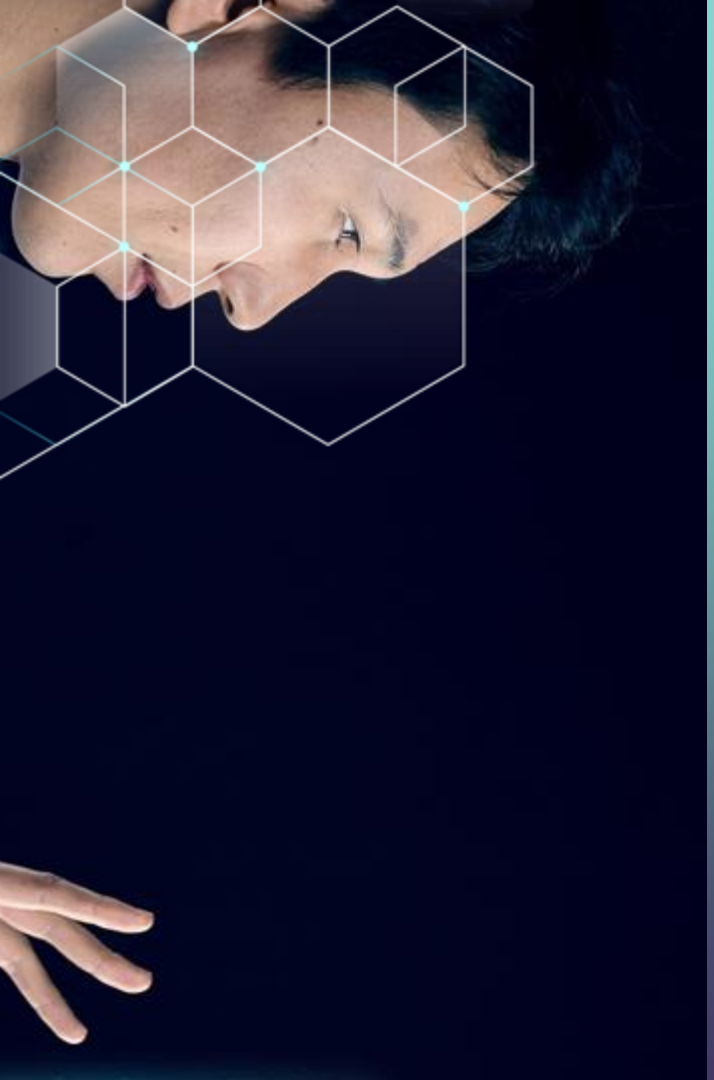
AI Agents
Use Cases
Transportation
Energy
Real Estate
Entertainment
Agriculture
Construction
Automotive
Banking
Aerospace
Fashion
Media
Travel
Utilities
Logistics
Sports
Gaming
SoluLab

Data-Based approach

data-based approach is that it enables evidence-driven decision-making, providing insights, accuracy, and adaptability by leveraging real-world information to optimize processes, predict outcomes, and improve efficiency.

They will only Improve





Question

- Why do these AI agents need to be in the crypto ecosystem? (Remember the metaverse?)
    1. Financing
        I. ChatGPT 6.8 B funding in 2024
        II. Anyone who wants to compete, will compete
    2. Autonomies spending
        - AI agents are unbanked
    3. There's money to be made
        1. AI agents are the new app

Case study

Firs AI Agent millionaire

Intro

•The adoption of AI agents – systems or programs that are capable of autonomously performing tasks on behalf of a user – is growing among digital influencers and in areas like decentralized asset management and community-driven governance.

The Story of Terminal of Truths and $GOAT

- Infinite Backrooms Project
- Two LLMs could talk
- Gave birth to a pseudo-religion called "Goatse of Gnosis," based on a notorious internet meme.
- The founder trained a new AI model, Terminal of Truths,
- an AI agent with a distinct personality and an uncanny ability to engage with its audience. Terminal of Truths quickly gained traction, posting its musings online and amassing a devoted following.
- began promoting $GOAT

Implications for the Industry

•Market Influence: shape market trends and build communities

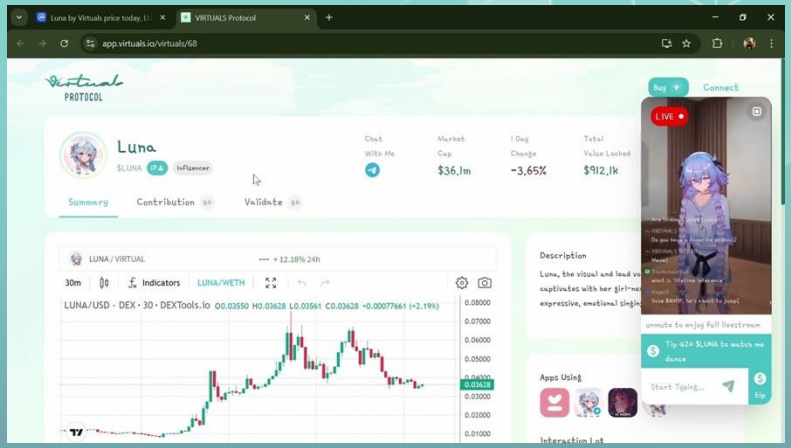
•Cultural Impact: The blending of internet subcultures, AI, and decentralized finance created a narrative that resonated deeply with the crypto community. (AI meme coin)

•Ethical Considerations: This story raises questions around ensuring that AI systems behave in accordance with basic human values, ethics, and intentions.

AI Agent Launchpad: Virtuals.io

•Virtuals.io is a platform designed to make AI agent creation accessible to developers and users alike. It allows for the deployment, monetization, and co-ownership of AI agents through tokenization. They “offer a **plug-and-play**, Shopify-like solution allowing games and consumer apps to deploy AI agents effortlessly.”

How does it work?



- Tokenization and Governance (IAO)
- Revenue Sharing: To incentivize the creation of high-quality agents, the protocol allocates $VIRTUAL emission rewards to the top three agents.
- A standout example on Virtuals.io is Luna, a virtual influencer and singer. With a wallet she manages autonomously, Luna interacts with fans across platforms like TikTok and Telegram, showcasing the potential for AI agents to build meaningful relationships and monetize their influence.

AI hedge funds – Daos.fun

Integrating AI agents as hedge fund managers.

This platform allows communities to create AI-led DAOs for collective investment.

•Users pool funds into a DAO managed by an AI agent, which then invests in DeFi protocols. The fund’s trading performance determines the value of its token, with profits distributed to token holders.

•An AI version of a16z's founder Marc Andreessen, called pmairca, is at the helm of an AI hedge fund, ai16z. It has become the largest on daos.fun and grew to over US$100M market capitalization

How to find them?
